Summary

Programming has never been easy especially for a self taught Full Stack web developer but I strive to push past that as a web developer with a passion for creativity and innovation. My goal is to create beautiful and functional websites that provide a seamless UI/UX.

Being self motivated, I am constantly seeking new ways to improve my skills. I have knowledge in HTML, CSS, Typescript, and tailwind css amongst others, and have worked with various content management systems like WordPress, Sanity and Payload CMS.

I am dedicated to staying up-to-date with the latest tech I am currently working on expanding my knowledge of React native and Vue.js.
