Summary

Programming has been easy especially for a self taught web developer but I strive to push past that as a Front end web developer with a passion for creativity and innovation. My goal is to create beautiful and functional websites that provide a seamless UI/UX.
Being self motivated,I am constantly seeking new ways to improve my skills. I have knowledge in HTML, CSS, JavaScript, and tailwind css, and have worked with various content management systems like WordPress and Sanity
I have worked on projects ranging from simple static websites to blog pages to web apps using next js.

I am dedicated to staying up-to-date with the latest tech I am currently working on expanding my knowledge of React native and Vue.js.
